

Kilian Eller

Senior Android Developer

8+ years of Android experience
Kotlin Multiplatform (KMP) enthusiast

Android developer with 8+ years of experience shipping production apps used by millions of people, plus hands-on work building shared, cross-platform codebases with Kotlin Multiplatform. Skilled in modern app architecture, Architecture Components, and clean code principles, with a track record of optimizing performance and reliability at scale. Passionate about good UI/UX, accessibility, and open-source contribution.

Work Experience

OBI Smart Technologies GmbH

Android Developer (Team of 12 App Developers for Android & iOS)
3.54 million installs, 1.5 million monthly active users
Nov 2022 – Present | Cologne, DE (remote)

- Led the migration from XML and Fragments to Jetpack Compose, including a type-safe navigation architecture overhaul across the whole app
- Developed heyOBI's shared Kotlin Multiplatform library and the pipeline producing its iOS framework
- Ca. 20% faster startup via Baseline Profiles, and 99.48% crash-free across 5.4M monthly sessions (Firebase Crashlytics, Performance)
- Implemented multi-country and multi-language support for new market launches, including locale-aware APIs and country-specific validation
- Built the complete GitLab CI pipeline covering linting, automated testing, Firebase App Distribution, klib/SPM artifacts via JFrog and Play Store releases
- Modernized platform foundations, migrating Koin to Koin Annotations for compile-time-verified DI, GraphQL to REST, Retrofit to Ktor, plus feature-based modularization
- Authored the app's architecture reference wiki plus distribution and localization guides for a distributed team
- Deep native integration of Credential Manager, In-App Updates and Play Feature Delivery

Fleetboard Logistics GmbH

Android Developer (Working Student)
Mar 2019 – Oct 2022 | Volkach, DE (remote)

- Established the technical foundation for the new Fleetboard KMP app, including production-ready cross-platform database encryption
- Accelerated platform decision-making through structured framework evaluation (KMP, Flutter and Xamarin)
- Raised team adoption of Jetpack Compose

Eikona AG

Android Developer (Working Student)
Mar 2017 – Feb 2019 | Volkach, DE

- Successfully migrated large parts of the codebase from Java to Kotlin
- Reliable real-time device tracking across diverse hardware environments, including Android devices without Play Services and a wide range of industrial scanners

Competence

Kotlin Multiplatform

Strong competence in Kotlin Multiplatform for sharing business logic across Android and iOS. Experienced in integrating shared modules with native SDKs for Android and Swift for iOS.

Native Android

Expertise building Android apps with native SDKs in Kotlin and Java. Skilled in Architecture Components (ViewModel, Room, Navigation), Coroutines, and Jetpack Compose for modern, testable UI.

CI/CD

Proficient in GitLab CI/CD for automated building, testing, and deployment of mobile applications. Experienced with GitHub workflows, pipeline configuration, Kotlin libraries (KLib), and Swift Package Manager (SPM) distribution via JFrog. Skilled in optimizing development processes for efficiency, reliability, and production readiness.

App Quality & Monitoring

Skilled in using Firebase's services like Crashlytics, Performance Monitoring, Analytics and App Distribution. Ensures mobile applications are reliable, maintainable, and perform optimally in production environments.

Education

Fulda University of Applied Sciences

Bachelor of Science

Computer Science 1.9
Analysis of the encryption of SQLite databases in Kotlin Multiplatform
Mobile applications in terms of security and performance.
Oct 2018 – Sept 2022 Fulda, DE

University of Würzburg

Computer Science
Oct 2016 – Oct 2018 Würzburg, DE

Projects

Battleship

- Creation of a real-time multiplayer Battleship game
- Enabled cross-platform gameplay on macOS and Windows using Kotlin Multiplatform
- Ktor server-client architecture with an in-app local server or headless remote server, tested on an AWS instance

Bitwarden Android App (Contribution)

- Android Credential Manager API implementation for reading and storing Passwords, previously only Passkeys
- Merged and live in the Bitwarden Android app today (9.2k-star open-source project)

HomeAssistant Integrations

- HomeAssistant integrations for Vogels Motion Mount and Blanco Unit via Bluetooth
- Reverse engineered Bluetooth protocol with Frida and Wireshark, and token algorithm with reFlutter and reverse_flutter
- Available via HACS (HomeAssistant Community Store)

Rhasspy

- Development of a client for Rhasspy voice assistant satellite with local wake word recognition
- Implementation of MQTT and Rest API via Ktor
- Kotlin Multiplatform for potential iOS implementation

AndroidResampler

- Low-latency native audio resampler for Android in C++ on top of Google's Oboe, exposed to Kotlin via JNI

Website

- Early adoption of Compose WASM in dev status for my personal website, displaying possibilities and limitations of future tech
- Runs on Web, Desktop and Mobile with a fully adaptive layout built on custom layouts and Material3 Compose Navigation3
