

Kilian Eller

Senior Android Developer

8+ years Android Experience

Kotlin Multiplatform (KMP) enthusiast

Cross-platform and Android developer with a strong foundation in native Android development and hands-on experience building multiplatform applications using Kotlin Multiplatform. Skilled in modern app architecture, clean code principles, and creating efficient, user-focused mobile solutions. Passionate about delivering good UI/UX, ensuring accessibility, and contributing to open-source projects.

Work Experience

OBI Smart Technologies GmbH

Android Developer (Team of 12 App Developers for Android & iOS)

2.8 million downloads, 1.2 million active users

Nov 2022 – Present | Cologne, DE

- Ca. 20% faster app startup time by optimizations like Baseline Profiles
- 99.78% crash-free sessions across ~3.5 million monthly sessions through monitoring and testing using Firebase Crashlytics and Firebase Performance
- Introduced KMP module to share code and ui between Android & iOS for the recently released energy tracker and future development
- Led UI migration from XML to Jetpack Compose for faster feature development
- Automated build & release workflows enabling rapid iteration through a complete GitLab CI pipeline including Linting, Testing, Distribution of Builds via Firebase App Tester and klib, spm artifacts via JFrog
- Enhanced user experience through deep integration of native Android features like Credential Manager, In App Updates, Multi- language & multi-country support, and Play Feature Delivery

Fleetboard Logistics GmbH

Android Developer (Working Student)

Mar 2019 – Oct 2022 | Volkach, DE

- Established the technical foundation for the new Fleetboard KMP app
- Enabled secure local data storage through production-ready cross-platform database encryption
- Accelerated platform decision-making through structured framework evaluation (KMP, Flutter and Xamarin)
- Raised team adoption of Jetpack Compose

Eikona AG

Android Developer (Working Student)

Mar 2017 – Feb 2019 | Volkach, DE

- Successfully migrated large parts of the codebase from Java to Kotlin
- Reliable real-time device tracking across diverse hardware environments, including Android devices without Play Services
- Broad compatibility achieved with a wide range of industrial scanners

Languages

German	native
English	C1

Competence

Kotlin Multiplatform

Strong competence in Kotlin Multiplatform for sharing business logic across Android and iOS. Experienced in integrating shared modules with native SDKs for Android and Swift for iOS.

Native Android

Expertise in building Android apps with native SDKs using Kotlin and Java. Experienced with Jetpack compose and deep system integration, including Credential Manager, In-App Updates, and Play Feature Delivery.

CI/CD

Proficient in GitLab CI/CD for automated building, testing, and deployment of mobile applications. Experienced with GitHub workflows, pipeline configuration, Kotlin libraries (KLib), and Swift Package Manager (SPM) distribution via JFrog. Skilled in optimizing development processes for efficiency, reliability, and production readiness.

App Quality & Monitoring

Skilled in using Firebase services like Crashlytics, Performance Monitoring, Analytics and App Distribution. Ensures mobile applications are reliable, maintainable, and perform optimally in production environments.

Education

University of Applied Science Fulda Bachelor of Science

Computer Science	1.9
Analysis of the encryption of SQLite databases in Kotlin Multiplatform Mobile applications in terms of security and performance.	
Oct 2018 – Sept 2022	Fulda, DE

University of Würzburg

Computer Science	
Oct 2016 – Oct 2018	Würzburg, DE

Projects

Website

- Early adoption of Compose WASM in dev status for my personal website, displaying possibilities and limitations of future tech
- Works for Web, Desktop and Mobile
- Fully adaptive Layout without compromises by using custom layouts and modern Material3 Compose Navigation3 for enhanced user experience

Bitwarden Android App (Contribution)

- Android Credential Manager API implementation for reading and storing Passwords, previously only Passkeys
- Merged just recently

HomeAssistant Integrations

- HomeAssistant Integrations for Vogels Motion Mount and Blanco Unit via Bluetooth
- Reverse engineered Bluetooth protocol with Frida and Wireshark and token algorithm with reFlutter and reverse_flutter
- Available via HACS (HomeAssistant Community Store)

Rhasspy

- Development of a client for Rhasspy voice assistant satellite with local wake word recognition
- Implementation of MQTT and Rest API via Ktor
- Kotlin Multiplatform for potential iOS implementation
- 100% crash-free sessions across 796 users and 1,984 sessions last month
- Available for open testing on the Google Play Store

Battleship

- Creation of a Multiplayer Battleship game
- Enabled cross-platform gameplay on macOS and Windows by using Kotlin Multiplatform
- Modern server-client architecture through Ktor and a future-proof module structure providing in-app local server or headless remote server, tested on AWS instance
